                                  1 76:793-802(1994).

FUNCTION: PART OF THE RECEPTOR FOR INTERFERON GAMMA. REQUIRED FOR SIGNAL TRANSDUCTION. THIS ACCESSORY FACTOR IS AN INTEGRAL PART OF THE IFN-GAMMA SIGNAL TRANSDUCTION PATHWAY AND IS LIKELY TO INTERACT WITH GAF, JAK1, AND/OR JAK2.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

"Characterization of the 5' flanking region and gene mouse interferon-gamma receptor.";

Gene 154:219-223(1995).

-1- FUNCTION: RECEPTOR FOR INTERFERON GAMMA. TWO RECIONSTREED AT SER/THR RESIDUES.

-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-1- STMILARITY: CONTAINS 2 IMMUNOGLOBULIN-LIKE C2-TY

"A receptor for interleukin 10 is related to interferon receptors.";
Proc. Natl. Acad. Sci. U.S.A. 90:11267-11271(1993).
-I- FUNCTION: RECEPTOR FOR IL-10; BINDS IL-10 WITH A HIGH AFFINITY.
-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-I- SUBCELLULAR LOCATION: TYPE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STRAIN-C57BL/6

"CDNA and amino acid sequences of bovine tisue factor.";

Biochem. Biophys. Res. Commun. 181:1145-1150(1991).

-i- FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH CIRCULATING FACTOR VII OR VIIA. THE [TF:VIIA] COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE NORMAL HEMOSTASIS BY INITIATING THE CELL-SURFACE ASSEMBLY AND PROPAGATION OF THE COAGULATION PROTEASE CASCADE.

-i- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.
